Important Information Regarding Product Safety

Safety Instructions

This data sheet contains information on installing and commissioning the product "M250, M250A90". Each person who carries out work on this product must have read and understood this data sheet. If you have any questions that are not resolved by this data sheet, you can obtain further information from the supplier or manufacturer.

If the product is not used in accordance with this data sheet, the protection provided will be impaired.

Applicable regulations must be observed when installing and using the device. Within the EU, these include regulations regarding occupational safety and accident prevention as well as those from the VDE (Association for Electrical, Electronic & Information Technologies). If the device is used in other countries, it is the responsibility of the system installer or operator to comply with local regulations.

Mounting, installation and commissioning work on the devices may only be carried out by qualified technicians. Qualified technicians are persons who are familiar with the described product and who can assess given tasks and recognize possible dangers due to technical training, knowledge and experience as well as knowledge of the appropriate regulations.

Legend

WARNING

Indicates a hazard of medium risk which can result in death or severe bodily injury if it is not avoided.

CAUTION

Indicates a hazard of low risk which can result in minor or medium bodily injury if it is not avoided.

NOTICE

Indicates a hazard of medium risk which can result in material damage or malfunctions if it is not avoided.

NOTE

Indicates additional information that can simplify the work with the product for you.

Notes on Disposal

For disposal, the product is considered waste from electrical and electronic equipment (electronic waste) and must not be disposed of as household waste. Special treatment for specific components may be legally binding or ecologically sensible. The local and currently applicable legislation must be observed.

Product Description

M250 and M250A90 actuator

Application

The M250 and M250A90 compact actuator, with a positioning force of 1,600 N, is used for fine stroke adjustment of two-way and three-way valves of types RK65..100(-BF), RF65..100(-BK), RD65..100(-BF), RWD65..100, RGD50..100 and RWG50..100.

The actuators are controlled with a 3-point signal (Open/Stop/Closed).

Item

M250 AC 230 V actuator with 3-point control M250A90 AC 24 V actuator with 3-point control

Technical Data

Nominal voltage M250 AC 230 V \pm 10%, 7.5 VA

M250A90 AC 24 V ± 10%, 7.9 VA

Actuator Reversible synchronous motor

Limit stop Force-dependent motor switch-off via

micro-switches at the valve end positions

Control 3-point signal (Open/Stop/Closed)

Hub Max. 30 mm, automatic limit stop via micro-switches Position indicator Bridge within the position marks on the actuator

Travel time 6.6 s/mm nominal stroke, approx. 200 s for 30 mm nominal stroke

Positioning force 1,600 N Ambient temp. 0 to 50 °C Degree of protection IP54

Protection class I in accordance with EN 60730 M250

III in accordance with EN 60730 M250A90

Installation position
Anywhere from vertical above the valve to a horizontal position

Manual mode By means of lifting button and handwheel on actuator

Maintenance The working drive is maintenance-free.

Depending on the operating conditions, the threaded spindle should be

greased as needed.

Weight 3.5 kg

Accessories (not included in delivery)

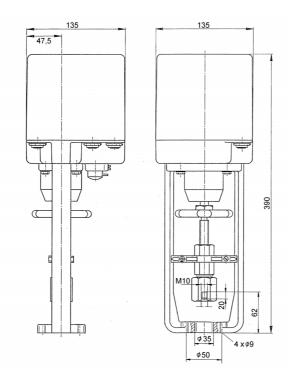

E/M200-M300 Switch module with two additional end switches,

voltage-free, max. AC 250 V, 3 A;

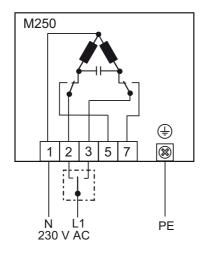

feedback about both valve end positions (open/closed).

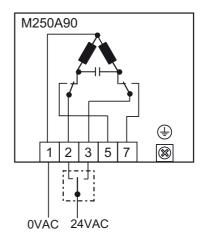

R1/M200/100 Potentiometer module with potentiometer 100Ω for position feedback R1/M200/1000 Potentiometer module with potentiometer 1000Ω for position feedback

Connection

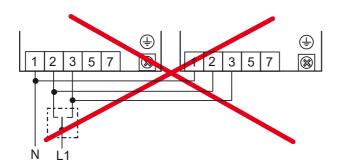

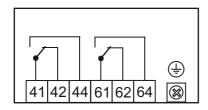

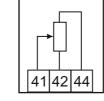

NOTICE

Connecting additional actuators in parallel is not allowed because they will affect each other.

Connecting Accessories

Additional end switch E/M200-M300, Max. AC 250 V, 3 A

Feedback resistor R1/M200/1000, R1/M200/1000

Manual/Automatic Mode

- (1) Lifting button
- (2) Handwheel
- ▶ Press the red lifting button (1) and engage (quarter turn) for manual mode.
- Adjust manually by turning the handwheel (2).
- ▶ To return to automatic mode, the lifting button (1) must be disengaged again.

Installation

WARNING

Warning: Mains voltage AC 230 V.

Electrical installation and unit connection may only be carried out by qualified technicians.

The mains supply may only be connected after the electrical installation.

Be sure to comply with VDE guidelines and local wiring regulations.

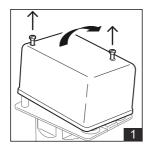

The device is connected according to the obligatory wiring diagram.

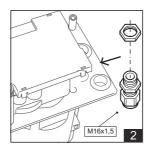

CAUTION

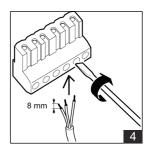

The actuator must be electrically connected as a fixed installation.

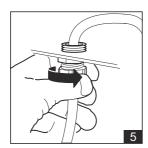

An M16 x 1.5 screw fitting (included in the scope of delivery of the actuator) is to be used as a strain relief device. The electrical connection is to be made using plug-in screw terminals (connection diameter 0.3 mm to 2.3 mm). Cables between the low voltage lines (AC 230 V) and the other lines (e.g. positioning feedback connection) must be routed separately.

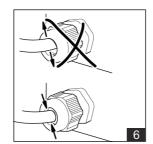

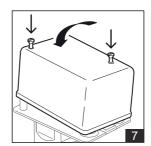

Datasheet 3.10-10.250-10-EN Issue 2015-06-01

M250 and M250A90 Actuator

with Two-way/Three-way Valves of the RK/RF/RD/RWD/RGD/RWG Series

Product Description

WARNING

If low voltage (AC 230 V is applied, the device must be installed to meet the requirements of protection class I.

The contacts on the end switches must only be used with voltages of the same installation category. The wiring of the PE terminal must be connected between the terminal clip and the square washer (Cupal washer), with the copper-coated side of the washer facing the terminal clip.

Copper-coated side (1) of the square washer (Cupal washer)

RK65..100(-BF)M250(A90) Three-Way/Two-Way Valve with Actuator

Application

The gray cast iron three-way valves and two-way valves with actuator M250(A90) are used for mixing liquids precisely.

The valves are used as two-way valves with the BF blank cover on gate B.

The actuator is controlled with a 3-point signal (Open/Stop/Closed).

with Two-way/Three-way Valves of the RK/RF/RD/RWD/RGD/RWG Series

Valve Installation

NOTICE

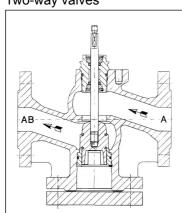

The valve may only be installed by qualified technicians. In addition to the generally valid installation guidelines, the following points are to be observed:

- The valve ports come with protective caps to protect against contamination. They are to be removed before installing the valves.
- The pipeline system and the interior of the fitting must be free of foreign objects. In the event of contaminated media, dirt collectors are to be inserted upstream of the valves.
- There must be no tension between the valve and the pipeline connection.
- Use only perfectly fitting flange seals, inserted centrally in the valve flanges.
- To avoid eddy formations in the valve body, the valve should be installed in a straight section of the pipe. A distance of 10 times the nominal diameter is recommended between the valve flange and manifold or other similar parts.
- The installation location is to be selected so that the ambient temperature at the actuator is kept between 0 °C and 50 °C.
- When mounting, the permissible max. pressure difference ∆p and the specified direction of flow must be taken into account (see table in "Types" section, as well as the "Valve Principle").
- The three-way valves are to be used as mixing valves. Pay attention to the direction of flow (see fig. "Valve Principle").
- The actuator can be installed vertically above the fixture, or in any position as far as a horizontal position. When installed horizontally, the drive pillars must be one upon the other. Where applicable, turn the cross member after loosening the retaining nut.
- To remove the actuator hood, approx. 180 mm of free space is required above the drive.
- The actuator is delivered with a protective box. Up until commissioning, this cover protects the drive during the installation phase and pipeline work.
- Observe the direction of flow arrow on the valve body. Inverting the direction of flow impairs control behavior.

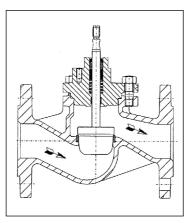

Valve Cross-Sections with Flow Directions

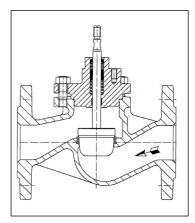

Two-way valves

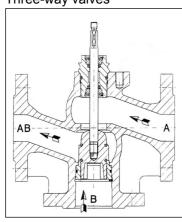

RD..

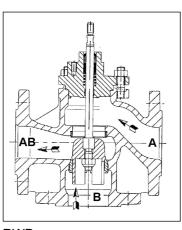

RGD..

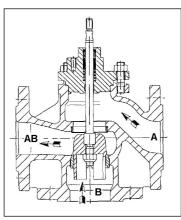

Three-way valves

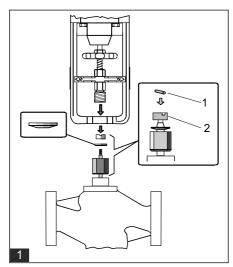

RWD..

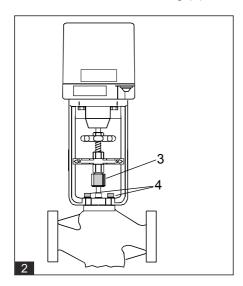

RWG..

Installation of the M250 and M250A90 actuator

- (1) Pin
- (2) Threaded ring
- Screw upper surface of threaded ring (2) flush to upper surface of the valve stem. When doing this, align the slot of the threaded ring (2) with the slot of the valve stem so that the pin (1) can be inserted.
- ► Secure the threaded ring (2) with the pin (1).

- (3) Union nut
- (4) Screws (2 or 3 screws depending on type of valve)
- ▶ Fasten the actuator in the valve flange with the screws (4) depending on the number of bores.
- ▶ Tighten the union nut (3) with the SW30 open-end wrench

Installation instructions

- If the valve is installed in the plant, ensure that no differential pressure builds up in the valve body before beginning work. If necessary, close the gate valve and switch off pumps.
- After the pipeline has cooled off, the actuator can be installed.
- The actuator is dismounted in reverse order.

Datasheet 3.10-10.250-10-EN Issue 2015-06-01

M250 and M250A90 Actuator

with Two-way/Three-way Valves of the RK/RF/RD/RWD/RGD/RWG Series

Product Description

Commissioning

General Information

The commissioning process may change if accessories are installed. In such cases, commissioning is described in the data sheet of the accessory that is being used.

WARNING

Caution: AC 230 V mains voltage may be present at the connection terminals of the switch module when the E/M200-M300 switch module is used.

Actuating direction

The actuating direction of the valve is to be checked, and changed if necessary, according to the plant function.

WARNING

Warning: Mains voltage AC 230 V.

The connection lines must be free of voltage before the actuating direction is reversed.

Actuating direction	(M)	M	M
Voltage at Terminals 1 - 2		AB A	AB A
Terminals 1 - 3		AB A	AB A
	<pre>= open</pre>	= closed	▲ = flanged off
